

Job Description for Senior Staff Software Engineer

Job Description

About the Team & Role

At SailPoint, our Engineering team is where high-quality professional software engineering meets massive individual impact. We build enterprise-grade SaaS products on a mature, cloud-native, event-driven microservices architecture hosted in AWS.

We are seeking a seasoned **Senior Staff Software Engineer** with deep expertise in Java and modern distributed architectures. In this role, you will lead the technical design, development, and scaling of core microservices and intuitive full-stack web interfaces.

The Mission

To architect, scale, and modernize SailPoint's AWS cloud-native event-driven microservices and full-stack interfaces—driving system resilience, lowering latency, and setting core software craftsmanship and testing standards across the organization.

Key Responsibilities

- **Microservice Architecture:** Deliver efficient, maintainable, and highly reliable enterprise solutions and RESTful APIs in a Java and AWS environment.
- **Full-Stack Implementation:** Design and build intuitive, responsive web UIs using JavaScript (ES6+), React, Angular, or ExtJS that integrate seamlessly with backend object models.
- **Production Excellence:** Instrument code to collect production performance telemetry and proactively optimize distributed systems for scale and low latency.
- **Testing & Quality Assurance:** Maximize automated test coverage (unit, integration, end-to-end) across the entire stack to ensure seamless continuous delivery.
- **Technical Leadership & Mentorship:** Drive architecture discussions, lead comprehensive code reviews, provide accurate sizing for product requirements, and mentor peers across the engineering org.

Requirements

- 14+ years of professional software development experience delivering scalable, enterprise-grade SaaS applications.
- **Deep Java Expertise:** Advanced knowledge of Java, object-oriented analysis, design patterns, and multithreaded systems.
- **Full-Stack Proficiency:** Strong understanding of modern JavaScript frameworks (such as React, Angular, or Backbone), ES5 to ES6+, HTML5, and CSS.
- **Distributed Systems Knowledge:** Proven experience building and consuming RESTful APIs, decoupled microservices, and distributed backend components.
- **Testing Discipline:** Demonstrated commitment to automated testing, code coverage metrics, and continuous deployment workflows.
- **Communication & Leadership:** Strong cross-functional communication skills with the ability to articulate technical tradeoffs to product managers, UX designers, and senior leadership.
- **Education:** Bachelor's or Master's degree in Computer Science, Computer Engineering, or equivalent practical experience.

What You Will Achieve (Year 1 Milestones)

Timeline / Milestone & Expected Impact

First 30 Days : System & Telemetry Deep-Dive: Map the architecture across Java services and AWS infrastructure; analyze production metrics to pinpoint latency bottlenecks and resolve initial high-priority service defects.

First 60 Days : Ship Core Microservices & UI: Design and deploy high-throughput Java REST microservices to production and integrate responsive UI workflows using modern JavaScript frameworks.

First 90 Days : Elevate Quality & CI/CD: Establish automated unit, integration, and E2E testing pipelines with high code coverage, ensuring zero critical regressions and rock-solid continuous delivery.

Months 4–12 : Drive Architectural Evolution: Lead multi-quarter architectural epics, mentor senior engineers, and optimize distributed event streams and data pipelines for enterprise scale.

Preferred Qualifications

- Deep hands-on experience with Amazon Web Services (AWS) cloud-native architectures (e.g., ECS, EKS, Lambda, SQS, SNS, DynamoDB).
- Experience with Continuous Integration & Continuous Delivery (CI/CD) pipelines.
- Exposure to Big Data, Data Pipelines, or Machine Learning product ecosystems.
- Experience instrumenting distributed tracing, observability, and APM tools (e.g., Datadog, CloudWatch, Prometheus).

Benefit Details

- **Comprehensive Health & Wellness :** 100% company-paid medical insurance premiums covering employees and dependents; term life and accident insurance included.

- Preventive Care : Company-sponsored annual health check-ups for employees and discounted diagnostic rates for family members.
- Financial & Equity Rewards : Competitive base salary, annual performance bonus, and private equity / equity incentives at qualifying levels.
- Time Off & Balance : 24 paid annual leaves plus 10 declared public holidays each calendar year
- Workplace Flexibility : Hybrid work model (2–3 days in-office per week) with flexible working hours to support work-life integration
